

Why Assurance Fails in Most Organisations

Disconnected Systems. Disconnected Accountability.

Disconnected systems create disconnected accountability.

Teams

The Risk You Cannot See

Unlinked silos hide the **true risk** to your organization.

When context is missing, **risk is underestimated.**

The Hidden Cost of Compliance

Assurance without operational context is inefficient.

Most organisations pay **repeatedly** for the same evidence.

Why 'Green' Reports Don't Mean Safe

When governance is disconnected from **operation**, reports deceive.

Reporting without **operational linkage** creates false assurance.

Galileo Functional Model

How Everything Connects

Grouping Capabilities & RBAC

A business-aware asset model, not just an asset register.

From Asset to Assurance

How Galileo hands structured context to VERA
and becomes provable assurance

Assurance is attached to the real operational objects — not static documents.

From Assurance to Intelligence

How assured data becomes decision intelligence

Once assurance is trusted, intelligence becomes reliable.

Federated Galileo Operating Model

How Galileo supports multi-org and group working

 RBAC  Field-Level visibility  Organisation boundaries  Audit Trails

One platform. Many organisations. **Controlell**  sharing.

The Missing Layer Between Operations and Governance

When governances have **operational tools** and **governance layer**.

Galileo and VERA provide the **missing link** between how organisations operate and how they govern.
